Abstract (en)
[origin: WO2009000382A1] A system for reminding a patient to take a medicine and for checking that the medicine has been taken by the patient from a blister pack (10) comprises: a blister pack (10) with a bottom part (12), having at least one receptacle (14) formed from a bottom film and containing a tablet (16) or similar portion of medicine, and with a cover film (18) that can be pressed through and that is sealed against the bottom part (12); an individual identification code (40) assigned to each receptacle (14), printed on the bottom part (12) and/or on the cover film (18) and visible to the patient after the receptacle is opened; a storage medium for storing instructions to patients on taking the medicine and for storing the identification codes (40) of the blister pack (10) or for storing means of generating the identification codes (40); and a means communicating with the storage medium and used for processing the data stored in the storage medium and for communicating instructions and information to the patients.
