Abstract (en)
[origin: WO2009001178A1] An improved self-contained underwater breathing apparatus (10) comprising a watertight container enclosure (11), preferably made of rigid material, which can be selectively opened and worn by the user like a backpack, a pressure reducer (22) constrained inside the watertight container enclosure (11) and an external console element (25) connectable to other air supplying devices, wherein the pressure reducer (22) is connectable on one side to an air store (18), in turn constrainable inside the watertight container enclosure (11), and connected on the other side to the external console element (25), provided with buoyancy control means (30-36, 40-41), the improved self- contained underwater breathing apparatus (10) being stably assembled.
