Abstract (en)

[origin: WO2009002057A2] Disclosed herein is a container with an anti-loss and anti-idle-rotation cap, which affords convenience and an improved sensation of use, in addition to preventing the contamination of the cap. The container includes a cap having a cap body, an indication ring, and a plurality of bridges, and a container body having a threaded fastening part, a ring stopping step, and an indication ring seat. The cap body and the indication ring are integrally coupled at a predetermined portion thereof with each other via a coupling part so that they are not separated from each other. A wedge and a wedge hole are provided on the cap body and the indication ring, or are provided on the cap body and the container body, so that the cap body is locked to the indication ring or the container body when the cap is opened to be adjacent to the coupling part.
