Abstract (en)

[origin: WO2009000455A1] The present invention concerns a protective enclosure for protecting vessels such as phials and ampoules for liquids, particularly liquid medicaments, against breakage. One and the same protective enclosure is suitable for different sizes of phial and consists of a generally cylindrical body (1), a screw cap (2) and a plurality of axial webs (3) at intervals in the interior and at the lower end of the body (1), wherein a retaining ring (4) is inserted at the upper end of the body (1) so that a collar on the phial presses on the retaining ring (4) after the screw cap (2) has been screwed on, and wherein the base of the phial is at an interval from the base of the body (1) and not in contact with it.
