Abstract (en)

[origin: WO2008155328A1] The invention relates to a machine for cutting out designs (1) printed on a substrate in the form of a web (2) wound on a reel. This machine extends vertically and has web (2) driving means using a belt conveyor (13) which runs in a vertically oriented closed loop. This conveyor belt (13) offers an optimized nonslip surface based on the use of its two large lateral faces and is set up between a loading station (5) and an unloading station (7) installed on either side of the lateral faces of the conveyor belt (13).
