Abstract (en)

[origin: WO2009000589A1] Method and storage medium for storing and reading a data code, wherein at least two information tracks comprising electrically conductive material are printed onto a substrate such that parallel reading of the at least two information tracks ascertains a clock signal and a data signal which are used to form the data code. In this case, the clock signal is formed by logic ORing the information track, and the data code is ascertained by interpreting the information tracks taking account of the clock signal.
