Abstract (en)

[origin: WO2007048652A2] The invention relates to a device comprising a profiled rail (10) and at least one fastening element (12) for fixing a machine tool and/or a workpiece to the profiled rail (10). The fastening element (12) is provided with at least one clamping jaw (22, 24) and a clamping means (26) that is effectively connected to the clamping jaw (22) in order to brace the clamping jaw (22) with the profiled rail (10). According to the invention, the clamping means (26) is embodied as an eccentric lever.
