Abstract (en)

[origin: EP2161191A2] The vehicle has a control house (12) arranged in front of a superstructure in a form of a deckhouse (10), and a lifting device (14) for lifting of the control house. The lifting device has lifting arms (30, 32) connected with the superstructure by a pivoting joint and with the control house by another pivoting joint (48). The latter joint is arranged at a lower side of the control house or near the lower side at a rear wall of the control house. The control house maintains orientation during lifting and lowering. The former joint is arranged on a flat roof (22) of the superstructure.
