Abstract (en)
[origin: EP2161210A1] The container has a wall (2) with a multi-layered area (3) limited by two transverse seams (8, 9), where the multi-layered area has an inner layer (4) and an outer layer (5) formed as a gas passage area (10). Each of the layers has gas permeable planar parts (11, 11', 12, 12'), and a continuous connecting seam (13) is formed between the layers. The connecting seam divides the gas passage area into a set of chambers (14, 14', 15, 15') that are medium-conductively connected with each other. The gas permeable planar parts are attached to the separate chambers in different layers.
