Abstract (en)

[origin: EP2161389A1] The panel (10a) has a section formed by a sequence of peaks (11) and troughs (12) both longitudinally extended on a surface of the panel, where the panel is made of metallic sheet. The peaks and the troughs connected to each other by junction walls (14a, 14b). Two longitudinal edges (13a, 13b) are respectively extended along the walls at distances from the premier peak (11a) of the peaks and the last trough (12b) of the troughs. The troughs are partly flat, and the distances are lower than half of a width of the walls between the peak and the trough. An independent claim is also included for a roof of a building, comprising an assembly of panels.
