Abstract (en)

The connecting device (1) for an anchoring system (100), destined to constrain slabs (L), exhibits a plate body (2) which can be engaged to the slab (L) by means for anchoring (3), and spacers (4), located restingly on a rear surface (B) of the slab in order to generate, between the slab and the plate body (2), a space (I) which can be engaged by a hook (102) of the support element (101). The anchoring element is also defined by a portion (7) of the plate body (2), exhibiting an appendage (7a) resting on a striker surface (103) of the hook (102) which is solidly constrained to the anchoring system (100).
