Abstract (en)

[origin: EP2161392A1] The castor (10) for a movable scaffold has a bearing and connecting means upon which the wheel is mounted and which has a tube with a longitudinal slot. A hole pattern with holes following in the longitudinal direction lies opposite the longitudinal slot. The bearing and connecting means has a spreading element and a screw, wherein the screw is inserted through one of the holes of the hole pattern and screwed into the spreading element which is spread by tightening down of the screw. An independent claim is included for a movable scaffold with castors according to the invention.
