Abstract (en)
There is provided a double locking connector (1) for an injector (10), which is used to connect, say, a tube to the injector (10) with enhanced binding force thereof so as not to be easily separated from the injector by external force, such as vibration. The double locking connector (1) includes a coupling connector (100) and a lock connector (200) coupled with each other. The coupling connector (100) includes a fitting tube (110) to be inserted into a fitting hole (11) formed in the injector (10), and an insert (120) to be fitted, via elastic movement thereof, into an insertion recess (12) formed at either side of the fitting hole (11) of the injector (10). The lock connector (200) includes a press arm (210) to press the insert (120) towards the insertion recess (12). As the press arm (210) of the lock connector (200) strongly presses the elastic insert (120) of the coupling connector (100), enhanced binding force between the coupling connector (100) and the injector (10) is accomplished.
