Abstract (en)
[origin: EP2161525A1] The modular heat exchanger (1) has an outer casing (70) and multiple heat exchanger modules. Each heat exchanger module is a preheater module (10), evaporator module (20,30,40) or overheating module (50), which comprises an inlet collector (11,21,31,41,51), an outlet collector (12,22,32,42,52), and pipes (120) extending in a meandering manner, through which the endothermic medium, particularly water, flows from the inlet collector to the outlet collector. The heat exchanger modules are disposed in a common outer casing, such that the exothermic medium flows around the outer casing.
