Abstract (en)
Comprising a stator (10) including a stator iron core (11) having a stator winding (12), a rotor (14) including a rotary member (30) and a shaft (16), a bearing (15) for supporting the shaft (16), and a bracket (17) for fixing the bearing (15), and further comprising an impedance adjusting member for adjusting at least one impedance of the impedance between the stator winding (12) and the inner ring of the bearing (15), and the impedance between the stator winding (12) and the outer ring of the bearing (15). The impedance adjusting member is a matching member for matching the individual impedances. The matching member is a capacitor (40) interposed between the stator iron core (11) and the bracket (17).
