Abstract (en)

[origin: WO2008138525A1] The invention relates to a filling magazine (19) for filling package slots (11) with rod-shaped products, comprising a receiving region (21) for a mass flow formed by the products and a filling region (22) for receiving the package slots (11) to be filled and comprising slot walls (13) for forming a plurality of slots (12), a blocking device (24) for blocking and unblocking the products present in the receiving region (21) being disposed between the receiving region (21) and the filling region (22), and further comprising a filling aid device (25) displaceable in the vertical and horizontal directions for the controlled filling of individual slots (12) of the package slot (11), characterized in that the filling aid device (25) is formed by a base plate (26) having a plurality of openings (27) for receiving the slot walls (13) of the package slot (11), such that when a filling aid device (25) is inserted in a package slot (11) a base plate segment (28) is disposed in each slot (12) of the package slot (11) substantially over the entire cross-section of the respective slot (12). The invention further relates to a filling station (10) having such a filling magazine (19).
