Abstract (en)

[origin: WO2008151341A2] The invention relates to a device for irradiating an object, in particular human skin, with UV light. Said device comprises a UV light source and an irradiation head containing imaging optics, UV light being projected from the irradiation head onto the object. According to the invention, a position detection unit (I) is provided for the contactless detection of the spatial progression of the region (3a) on the surface of the object (3) that is to be irradiated.
