Abstract (en)
[origin: US2010162868A1] The invention relates to a cutting blade for machines for slicing food products, particularly for high-speed slicers, wherein the cutting blade is a sickle-shaped blade rotating about a rotation axis during the slicing operation and having a cutting edge that deviates from a circular shape at the radially outer circumference thereof and revolves about the rotation axis, particularly in the manner of a spiral, the edge being positioned in a cutting plane extending perpendicular to the rotation axis, wherein the cutting edge forms the radially outer end of a cutting surface, which forms part of the blade back side facing away from a product to be sliced during the slicing operation and includes a blade angle together with the cutting plane, and wherein the size of the blade angle varies in the circumferential direction.
