Abstract (en)  
[origin: WO2009000450A1] The invention relates to a burner unit which has a gas inlet, a gas outlet and at least one porous element, having a gas inlet side and a gas outlet side, wherein the combustion takes place in the at least one porous element, and at least one motor-driven compressor, wherein a collecting and outlet element having at least two openings is arranged downstream of the porous element in the flow direction, wherein the at least two openings are situated at different distances from the gas outlet side of the porous element.
