Abstract (en)

[origin: WO2008153790A2] The present invention provides compositions and methods useful for detecting or treating asthma or other allergic or inflammatory diseases. In one aspect, the methods of the invention include modulating an IL-13/sIL-13Ra2 complex and methods of modulating expression of various nucleotide sequences of interest including Pira1, Vannin1 and ApoA1. In an aspect, the methods of the invention allow detection of an altered IL-13/sIL-13Ra2 complex level in a subject. Further aspects of the invention allow for identification of subjects suitable for inclusion in a sIL-13Ra2 related study or inflammatory related disorder study.
