Abstract (en)

[origin: WO2008150171A1] The use of enamel as dielectric intermediate layer in the manufacture of heating elements is known. The dielectric enamel layer is herein arranged on a generally metal substrate for heating, after which metal heating tracks are arranged on the dielectric enamel layer by means of silkscreen techniques. The invention relates to an improved heating element. The invention also relates to a liquid container provided with such a heating element.
