Abstract (en)

[origin: EP2163387A2] The method involves providing a thermal continuous flow dryer (5) and a cleaning device for cleaning of printing machine cylinders (4). Information e.g. actual temperature, discharge volume and limit values, of the continuous flow dryer are received in actual state conditions of the continuous flow dryer. A washing program is selected or created by considering contents of the information. The information are transmitted to the continuous flow dryer to change the actual state conditions, and the washing program is started. An independent claim is also included for a device for executing a method for cleaning printing machine cylinders.
