Abstract (en)  
The present invention relates to a levelling and support system comprising at least one base plate and at least one packer element, wherein the at least one base plate comprises at least a first leg portion lying in a first plane and at least a second leg portion lying in a second plane, the first and second planes not being coincident. The at least one packer element comprises at least one connection means for facilitating releasable connection with at least one of the at least first and/or at least second leg portions of the at least one base plate. The present invention also relates to a base plate and a packer element for use in the levelling and support system, and to a method of levelling and supporting a wall or panel or other structure.
