Abstract (en)

[origin: EP2164052A2] The arrangement has a receiving unit (22) receiving a transport container (12a) with a plug-in connector element (28) of a plug-in connector arrangement. The unit has another plug-in connector element (26), where the latter element is complementary to the former element. An electrical connection for transmitting information (54) is produced after the reception of the container in the receiving unit by the connector arrangement. A safety unit (38) is controlled based on the transmitted information. A sensor arrangement of the storing arrangement exhibits a sensor e.g. gas and position sensors. An independent claim is also included for a method for securing a transport container for storing a value note.
