Abstract (en)  
[origin: WO2009000977A1] The present invention relates to a sleeping set (1) made up of a sleeping bag (3) and a sack (2) comprising a first part (2a) and a second part (2b) defining an insertion opening (6) for inserting the bag (3) into the sack (2). Characteristically, the first (2a) and second (2b) parts are provided with attachment members (13a, 13b) made of a cohesive material capable of joining to form an airtight closure when pressed together, so that after the bag (3) has been placed in the sack (2), the set (1) having a given average thickness E0, after simple compression of the set by the user to join said attachment members (13a, 13b) and expel the air contained inside it through the vent element (6, 4), and after operation of the closure means (13a, 13b; 5) of the air vent element (6, 4), the set (1) assumes said predetermined configuration and has an average thickness E1 that is stable over time and less than the thickness E0.
