Abstract (en)
[origin: US2010242641A1] A fitting, especially of a piece of furniture used for sitting or lying down, includes a connecting bracket and a rotatable bracket that is pivotally connected thereto. The connecting bracket is provided with a force-transmitting element, particularly a toothed element, which may be arranged to be concentric with the shaft and is effectively connected to a linear adjusting element by means of a gear mechanism. The linear adjusting element is guided to be longitudinally adjustable along the rotatable bracket.
