Abstract (en)
[origin: WO2010004593A1] A shower head (4) comprising a pair of plates, for dispensing and closing (8, 16), directly facing each other relative to an axial direction (X-X). The closing plate (16) comprises a peripheral portion (24) plane and parallel to the dispensing plate (8), so as to directly interface in contact with the dispensing plate (8), and an intermediate portion (28) gradually spaced from the associable dispensing plate (8) so as to form therewith a collecting chamber (32) for the fluid to be dispensed having an axial thickness (36) that gradually increases moving from the peripheral portion (24) towards the intermediate portion (28). The shower head (4) is especially thin, inexpensive to manufacture and to assemble.
