Abstract (en)
[origin: WO2008145862A2] The invention relates to an underwater buoy for hanging a duct (60) between a sea bed and the surface, said buoy including a frame (10) and a plurality of modular members (50) adapted to be mounted in said frame, said modular members extending between two opposite modular-member ends (52, 54), said frame including a longitudinal body (12) for receiving said extended tubular duct, and retaining means (14, 16, 18) mounted on said body for maintaining the modular members (5) substantially parallel to said body. According to the invention, the retaining means include two retaining structures (14, 16) spaced from each other on said body (12), said retaining structures (14, 16) being maintained in a fixed position relative to each other in order to trap at least one modular member (50).
