Abstract (en)
[origin: WO2008148162A1] There is provided a beverage container closure which comprises a circumferentially disposed cup engagement means configured for releasable engagement about a beverage container opening. The closure further comprises an upper closure surface disposed intermediate the cup engagement means and a beverage container support extending from the closure surface a pre-determined height thereabove. The container support is surrounded at a bottom end by a gutter being disposed a pre-determined depth below the upper closure surface and the gutter is configured to support a bottom end of the beverage container. The beverage container support is configured to support and releasably engage the base of the beverage container.
