Abstract (en)
[origin: WO2008140293A1] The present invention relates to a method for storing and retrieving items in a warehouse which comprises at least one storage row for accommodating carriers, each storage row comprising at least one entry position, the carriers supporting the items, the method comprising: - each time adding a carrier to the at least one storage row at an entry position, such that a plurality of carriers are added to the row via the same entry position; - at times moving at least one of the carriers in the storage row away from said entry position for creating free space at said entry position; - selecting a carrier to be retrieved from the storage row; - retrieving the selected carrier from the storage row by moving the carrier away from the storage row. The present invention also relates to a warehouse system, a carrier and a shop or supermarket.
