Abstract (en)
[origin: WO2009004202A1] The invention relates to a textile coating (2) made from a web (3) of fibres including a first area (5) and a second area (7). The first area is a cohesion area where the fibres (4) of the web (3) are integrated into a tight entanglement (5) holding said fibres (4) and located only on a portion of the thickness (3) of the web. The invention also relates to a method for making a textile coating that comprises: a) while applying an alternating electric field to the web (3) having at least one face (8A, 8B) bearing a heat-fusible powdery binder (12), introducing the powdery binder (12) into the web (3) so as to concentrate the binder (12) at the first area (5); c) melting the binder (12) by supplying heat; and d) leaving or making the binder (12) to cure.
