Abstract (en)  
[origin: WO2008148528A1] The invention relates to a lighting fixture with at least one lighting fixture head (10) which accommodates a lamp, and a column (20) which supports this lighting fixture head (10). Expanded lighting fixture functions are achieved owing to the fact that a plurality of light sources (42) of a secondary illuminating unit (40) are disposed within a circumferential region around the column (20) having a radius which is smaller than that of the periphery of the lighting fixture head (10) and that, in the operating state, at least the lighting fixture head (10) can be illuminated directly with the light sources (42) from the side thereof facing away from the lamp or, in addition to the lighting fixture head (10), the column (20) is also illuminated.
