Abstract (en)

[origin: WO2008152300A2] The invention relates to a method for obtaining an outer coating for a photovoltaic device, said coating including a glass substrate having a texture in the form of at least one row of parallel slots preferably spaced by a uniform distance d, wherein the method is characterised in that it comprises using, for printing said texture, texture means including protrusions having a spacing different from the distance between two slot rows on the glass substrate. The invention further relates to a substrate or a photovoltaic module including a substrate that can be obtained according to the above method.
