Abstract (en)
[origin: EP2165638A2] According to the present invention, in the case that the rinse aid in the detergent drawer is used up, the washing program is changed by the control unit of the machine and the heat and durations at drying step are adjusted to values at which drying can be executed without rinse aid. According to the present invention, the data that the rinse aid is used up are recorded on the control unit by a controller sensing circuitry and then indicated on the display panel of the machine by the unit. Thus, a necessary continuous signal is indicated on the display panel until further rinse aid is supplied.
