Abstract (en)

[origin: EP2166152A1] The method involves removing ballast of ballast substructure (4), and removing material of a substructure (5) up to a desired depth. New substructures (8,9,10) are installed for producing new ballast (11). The removing material is separated from a mixing zone (6) in a transitional area between ballast substructure and the substructure. An independent claim is included for a device for improving or repairing railway tracks.
