Abstract (en)
[origin: EP2166199A1] The vane-type camshaft adjuster comprises a lateral plane, which is arranged vertical to its central axis (25), on which a spiral spring (12) rests, which holds a rotor opposite to a stator in certain angular position. The spiral spring has a right angle profile, where a spring section is bent through the lateral plane, such that the spiral spring is supported in torque proof manner against the stator or the rotor in form-fit manner.
