Abstract (en)

[origin: WO2008148945A1] The invention relates to the heat treatment of a consumable product contained in a bag (10). The product is introduced into a bag, which is then partially sealed, maintaining an initially unsealed zone forming a hole, and then moved along to a heating station, and which, after heating, is completely closed. While moving the bag along, the latter is held in place such that the initially unsealed zone occupies, as the bag passes through a sealing station, a given position relative to a sealing tool (120) present in this station, and additional sealing of the zone is performed when the latter occupies the given position.
