Abstract (en)

[origin: WO2009004034A1] The present invention relates to a dishwasher (1) comprising an upper and lower basket (3), wherein kitchen utensils can be placed, disposed inside the washing chamber (2). One of the criteria that directly affect washing performance is the arrangement of utensils in the baskets (3) and the position of the baskets (3) in the dishwasher. Height adjustable baskets (3) require arrangements to maintain the hydraulic supply to the spray arm at all heights. In the present invention this is achieved through the spray arm feed pipe having flexibility achieved through the use of plastic components in the feed pipe of differing hardness.
