Abstract (en)  
[origin: WO2009011693A1] A desktop hole punch device for punching holes in stacked sheet media such as paper is disclosed. The hole punch device includes at least one adjustable, laterally extending arm having markings thereon indicating standard office paper sizes. The markings are visible to the user through a window in the device. An edge guide at the distal end of the arm aligns the stack of sheet media and a curved page lifter extending from the edge guide reverses the natural curl in the paper stack for better and more precise hole punching.
