Abstract (en)

[origin: WO2008146315A1] An apparatus (1) for a product (3) wrapping machine (2) comprises: a first elongated element (7), supported by the machine (2) structure (8), being movable in such a way that a continuous strip (5) of wrapping material can be wrapped around both the first elongated element and the product (3) which is in turn wrapped in a preformed wrapper (4); an operating unit (9) having a reel (10) of adhesive tape, from which an end stretch (11) of tape is unwound and stably held flat in front of the first elongated element (7) and with an end (6) of the strip (5) of wrapping material inserted between them. The apparatus (1) also includes presser means (12; 25, 43, 45) and means (13; 46, 47) for moving the operating unit (9) against the wrapper (4) in contact with the first elongated element (7) and cutting means (23; 24) for cutting the adhesive tape from the relative feed reel (10) when said tape is fixed to the wrapper (4).
