Abstract (en)  
[origin: WO2009007564A2] The invention relates to a turbojet engine for an aircraft that comprises an engine provided in a nacelle and at least one heat exchanger (13) for cooling down a hot fluid collected in the propulsion system of the turbojet engine before re-injecting said partially-cooled hot flow into said propulsion system, characterised in that at least one heat exchanger (13) is a radial heat exchanger extending in the lower portion of the turbojet engine at a lower branching (16) of the turbojet engine.
