Abstract (en)  
[origin: WO2009013070A1] The invention relates to a high-pressure accumulator body (10) for a high-pressure injection system for fuel into internal combustion engines. The high-pressure accumulator body (10) comprises a plurality of high-pressure connections (28) in a shell (14), and a hollow space (54) forming intersecting points (56) together with lateral bores (78) of the high-pressure connections (28). The diameter (46) of the high-pressure accumulator body (10) is reduced between the high-pressure connections (28). A material reduction (64, 72, 74, 76) is configured on the side (68) opposite of the respective intersecting points (56) on the high-pressure accumulator body (10).
