Abstract (en)

[origin: WO2009012853A1] The invention relates to the construction or planning of individual components of a conventional container for storing a medium in such fashion that the container can be erected or retrofitted even in rooms in which the size of the access openings is limited. According to the invention, this objective is achieved by limiting the size of each individual planar element (110), from which the container is assembled, to a specified, standard size.
