Abstract (en)

[origin: WO2009010517A1] The invention relates to a measuring device comprising a support strip (13) with a bending sensor (15) and torsion sensors (17). According to the invention, the torsion sensors are located at a specific distance (a) from one another, preferably on the ends of the support strip (13). A modification to the angular position of the torsion sensors in relation to the central axis (v) is measured as the sensor signal and conclusions can be drawn about the state of torsion. Said torsion sensors can consist for example of pairs of acceleration sensors (16).
