Abstract (en)

[origin: EP2371427A1] The heel-piece has a tubular mobile body comprising a compression spring for releasing ski boot through an opening of the heel piece during an effort greater than a preset threshold. The body is moved with respect to a carriage around a connecting axle. The carriage includes a lower base (3) and a fixed actuating body (4) comprising an actuating surface i.e. ramp (7). The ramp is connected to the base by a connecting unit formed by the actuating body and another connecting unit formed by the axle between the carriage and the mobile body and lateral arms (11). An independent claim is also included for a device for fixing a ski boot on a ski.
