Abstract (en)  
[origin: EP2169143A2] The apparatus has a support (1) for forming a wall leg (4) and including an upwardly protruding holding web (8) engaging in a downwardly open groove (9) of a finishing strip (2) for clamping accommodation of the finishing strip. The support has a resilient securing tongue (10) with a leg extending approximately parallel to the holding web, where the tongue overlaps a securing stop (12) of the finishing strip, which extends transversally to the holding web. The leg of the tongue extends approximately parallel to the holding web and carries a latching nose (11), which overlaps the stop.
