Abstract (en)

[origin: EP2169162A2] The holding plate (1) has a plate (7) at whose side a mounting option (3) for a fitting is formed. The mounting option is provided in mounting holes (6) for connecting the holding plate with a frame. An adjustment element (2) i.e. pivot, is arranged at the plate for positioning the holding plate at a side of the frame opposite to the fitting. The adjustment element is formed as a single piece with the plate. The plate has slotted holes (5) through which fixing units are inserted. The slotted holes are positioned in a region of the plate outside a covered region of the plate. An independent claim is also included for a method for attaching a holding plate to a frame.
