Abstract (en)

[origin: EP2169168A2] The device has a lower part (1) connected with a door frame, and an upper part (2) connected with a door leaf and rotatable against the lower part around a cylinder axis (11). A guiding surface (12) at the lower part is inclined to the axis, where the upper part lying against the guiding surface is axially adjustable during rotation around the axis. A sleeve is suspended on a cylinder (3) of the lower part, and another sleeve is suspended on a cylinder (6) of the upper part. A front surface forming the guiding surface is designed as a flat or curved surface. An independent claim is also included for a door comprising a sealing strand.
