Abstract (en)

An engine setting system includes: an engine control device (1) that performs engine control based on a basic control map; and a terminal device (2) that is connected to and capable of communicating with the engine control device (1), and defines the control map that is used for correcting the basic control map, the terminal device (2) including: an input section (2a); a display section (2b) that displays a correction screen in which control targeted values are two-dimensionally arranged, the control targeted values constituting a correction control map to be corrected; and a map redefinition section (2d) that collectively corrects the control targeted values included in a correction object region (11) that is specified by input operation of the input section (2a), by use of a method that is specified by input operation of the input section (2a), and redefines the correction control map by use of the control targeted values that have been corrected, on the correction screen.
