Abstract (en)

[origin: EP2169297A1] The module (10) has a light source (14) e.g. filament lamp, arranged in a front opening of a concave reflector (12) i.e. mirror. An optical deviation lens (16) is placed in front of the source to deviate a part of light rays from the source, where the deviated light rays form indirect light rays. An occulting wall (40) occults the majority of the light rays emitted directly by the light source in a direction located between a contour portion of the lens and a front peripheral edge (18) of the reflector, while permitting the passage of majority of the indirect light rays.
